02 — Profile

A practitioner who *teaches*.

//

The most valuable lesson in finance is the one a textbook cannot offer — the lived experience of decisions made under uncertainty.

Chartered Accountant by training, I spent twenty-five years in the corporate world, navigating financial strategy, capital decisions, and the day-to-day judgements that determine whether enterprises endure or unravel. That practice forms the spine of how I teach today.

For the past fifteen years, I have been a visiting faculty member at leading Indian business schools, where my courses explore the architecture of financial analysis — how to read a company, how to value it, and how to separate signal from noise in equity and mutual fund markets.

My approach is unapologetically applied. Cases are drawn from Indian markets. Frameworks are stress-tested against real filings. Students leave with not just models, but the instincts to question them.

03 — Affiliations

Visiting faculty at *institutions* shaping Indian business.

i.

IMT Ghaziabad

GHAZIABAD · NCR

ii.

Indian Institute of Foreign Trade

NEW DELHI

iii.

BM Munjal University

GURGAON · HARYANA

04 — Expertise

What I *teach* & analyse.

§

Equity Valuations

Discounted cash flow, relative valuation, and the practical judgement calls that separate good models from defensible ones in Indian listed markets.

Mutual Fund Analysis

Reading factsheets beyond returns — risk-adjusted performance, style consistency, expense drag, and the long-arc compounding of disciplined choices.

Financial Analysis

Annual reports as primary documents. Ratio analysis as a language. The skills to interrogate management commentary and decode what numbers don't say.

GET IN TOUCH

Open to *guest lectures*, corporate sessions, and collaborations.

For speaking engagements, MDP sessions, or academic conversations on Indian finance.
